Task #1: Inheritance (Student and Graduate)

Code

```
class Student:
    def __init__(self, name, age, course):
        self.name = name
        self.age = age
        self.course = course

    def display(self):
        print("Name:", self.name)
        print("Age:", self.age)
        print("Course:", self.course)

class Graduate(Student):
    def __init__(self, name, age, course, research_topic):
        super().__init__(name, age, course)
        self.research_topic = research_topic

    def display(self):
        super().display()
        print("Research Topic:", self.research_topic)

# Create Graduate object
g1 = Graduate("Ali", 22, "Computer Science", "Artificial Intelligence")

# Display all information
g1.display()
```

Output

```
Name: Ali
Age: 22
Course: Computer Science
Research Topic: Artificial Intelligence
```

Task #2: Polymorphism (Payment)

Code

```
class cash_payment:
    def pay(self):
        print("cash payment")

class card_payment:
    def pay(self):
        print("card payment")

def make_payment(payment):
    payment.pay()

c1 = cash_payment()
c2 = card_payment()

make_payment(c1)
make_payment(c2)
```

Output

```
cash payment
card payment
```
